

ENERGY STAR® 2015 Snapshot

Measuring Progress in the Commercial and Industrial Buildings Sector

August 2016

An at-a-glance summary of the latest national, state, and local trends in commercial and industrial property energy benchmarking, including ENERGY STAR metrics and certification trends.

ENERGY STAR Year in Review

I am pleased to share with you the 2015 ENERGY STAR Snapshot, capturing the latest trends in commercial building and industrial plant energy efficiency. The Snapshot offers a unique peek into how businesses, organizations, and governments are cutting energy waste and curbing carbon pollution under the umbrella of EPA's ENERGY STAR program.

The pages that follow catalogue the market's embrace of EPA's ENERGY STAR Portfolio Manager as the industry standard for benchmarking, tracking and reporting energy savings. In fact, the market has relied on Portfolio Manager to benchmark 40 billion square feet of commercial floor space across 450,000 buildings, closing in on half of commercial floor space in the U.S.

The numbers are impressive, but it is the trends and successful strategies behind them that I ask you to consider as you review this Snapshot:

- School districts are leading change. For the first time, schools outnumbered all other building types certified as ENERGY STAR as increasing numbers of K-12 districts commit to organization-wide energy management, particularly in such places as Odgen UT, Honolulu HI, Augusta GA, and Akron OH (page 3).
- Companies with large portfolios are leading the way. Retail chains with large portfolios are driving this momentum, and retail stores are now the most-benchmarked facility type (page 2).
- Local and state government policies are driving activity. As more jurisdictions institute mandates and voluntary programs, benchmarking activity is growing. We're seeing a lot of activity in Idaho, Illinois, Maryland, Massachusetts, New Mexico, and Rhode Island (page 3).
- Energy data access is essential for instituting energy management and improvement. Service providers and utilities contributed to sixty percent of the benchmarking activity in 2015 through electronic data exchange.
- Water tracking is growing in importance. Buildings across 28,000 Portfolio Manager accounts are tracking water across five billion square feet of floor space.
- Campaigns encouraging voluntary actions result in significant energy reductions. Competitors in EPA-sponsored challenges have demonstrated that a reduction in energy and water intensity of more than 35 percent in just one year is possible.

As I celebrate the great progress evident in these pages, I also recognize that there is more to be done. Our coordinated efforts will be key to reaching the millions of buildings that make up the other half of the market—many owned by small businesses in hard-to-reach places—that are not yet benchmarking. I have no doubt that together, we can reach them.

Jean Lupinacci
Chief, ENERGY STAR Commercial & Industrial Buildings
U.S. Environmental Protection Agency

National Benchmarking

Organizations across the nation are benchmarking building energy and water consumption using Portfolio Manager. More than 60,000 accounts track building energy use, and more than 28,000 accounts track building water consumption.

These accounts collectively hold more than 450,000 buildings and more than 40 billion square feet of space for which energy and water is tracked (Figure 1). While new buildings continue to access the tool each year, the rate of growth in square footage varies as compared to growth in building count. Historically building types with typically large floor area, such as offices, K-12 schools, retail stores and hospitals, have benchmarked energy and water use, so this trend suggests that ENERGY STAR may have reached a certain benchmarking saturation point among very large buildings, and is now attracting smaller buildings, as well.

Of the more than 80 building types benchmarked in Portfolio Manager, the building types representing the greatest number of benchmarked buildings include retail, office, K-12 school, bank, and multifamily housing (see Figure 2a). However, when assessing square footage benchmarked in Portfolio Manager, a slightly different group emerges: office leads for cumulative benchmarked square footage, followed by K-12, multifamily housing, retail, and hospital (Figure 2b). Taken together, these charts tell a story about building size. For example, while retail stores make up 19% of all benchmarked buildings, they only make up 8% of the benchmarked square footage. This indicates that the retail stores benchmarked in Portfolio Manager are small compared to offices, for example, which make up roughly the same number of benchmarked buildings but represent 28% of the total benchmarked square footage.

Detailed information about buildings benchmarked by state, metropolitan area (as defined by Office of Management and Budget's Core-Based Statistical Area or CBSA), and building type is provided in Appendices A, B, and C.

Figure 1. Cumulative buildings and square footage benchmarked in Portfolio Manager

Figure 2a. Cumulative buildings benchmarked in Portfolio Manager by type

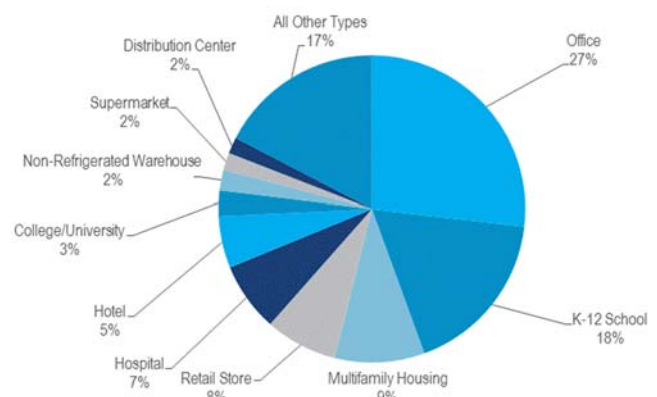

Figure 2b. Cumulative square footage benchmarked in Portfolio Manager by type

State & Local Benchmarking

Governments at all levels play an crucial role in the ENERGY STAR program. Many are taking important steps to protect the environment and reduce energy and water use. State and local governments across the country are adopting policies that leverage ENERGY STAR tools to reduce energy use in commercial buildings, through both voluntary campaigns and required policy measures.

Figure 3a below shows that every state in the nation is home to buildings for which energy or water use has been benchmarked in Portfolio Manager. Figure 3b highlights the states with the most growth in benchmarking activity between 2014 and 2015. Interestingly, even states with high levels of cumulative benchmarking activity, like Illinois and Texas, also show high rates of benchmarking growth, suggesting benchmarking momentum within the state.

Figure 4 provides a similar chart for city benchmarking activity and illustrates the difference in benchmarking and square footage growth in different locales. For example, while the growth in buildings benchmarked in Augusta, GA and Fresno, CA is roughly equal, the growth in square footage in Augusta is greater than that in Fresno.

More information about mandatory and voluntary state and local programs that leverage ENERGY STAR can be found at www.energystar.gov/government.

Detailed benchmarking data, by state and metropolitan area, is provided in Appendices A and B.

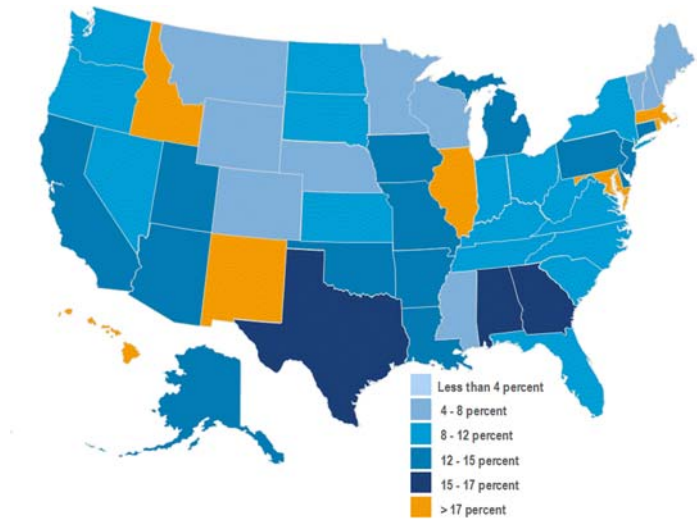

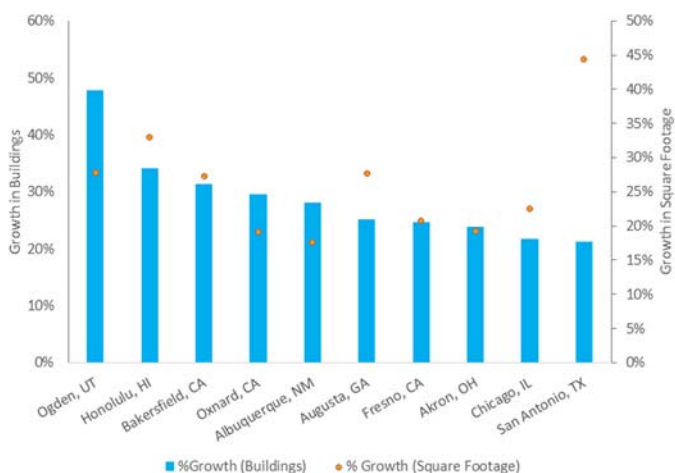

Figure 4. Top 10 metropolitan areas by growth in benchmarked buildings, 2014 to 2015 (cumulative)

ENERGY STAR Certification for Commercial Buildings

To be eligible for ENERGY STAR certification, a commercial building must earn an ENERGY STAR score of 75 or higher, indicating that it performs better than at least 75 percent of similar buildings nationwide. These buildings typically use about 35 percent less energy than average buildings. Since 1999, ENERGY STAR has certified more than 27,000 buildings and more than 4 billion square feet of space (Figure 5, below).

The following building types are eligible to earn the ENERGY STAR: bank, courthouse, data center, distribution center, financial office, hospital, hotel, K-12 school, non-refrigerated warehouse, office, multifamily housing, refrigerated warehouse, retail store, senior care community, supermarket/grocery, worship facility, and wholesale club/supercenter.

In 2015, roughly one-third of the more than 7,000 buildings certified were certified for the first time; the remaining two-thirds had already been certified in a prior year. This demonstrates the value of certification, as well as continued energy efficiency over time.

Figures 6a and 6b summarize ENERGY STAR certified buildings by type and illustrate that office, K-12 school, retail, and supermarket make up the majority of ENERGY STAR certified buildings.

These figures also help to show the relative size of certified buildings. For example, while hospitals are the eighth most frequently certified building type, they come in fourth in terms of certified square footage.

Table 1 demonstrates the distribution of certified buildings by size. More than half of all certified buildings are smaller than 100,000 square feet, but nearly 20% of certified buildings are larger than 200,000 square feet.

Detailed ENERGY STAR certification data is provided by state, metropolitan area, and building type in Appendices D, E, and F.

Table 1. Distribution of cumulative certified buildings by square footage

Range of Square Footage	Percent of Certified Buildings
<50,000	25%
50,001 to 100,000	33%
100,001 to 150,000	17%
150,001 to 200,000	7%
>200,000	18%

Figure 5. Cumulative ENERGY STAR certified buildings and square footage

Figure 6a. Cumulative ENERGY STAR certified buildings by type

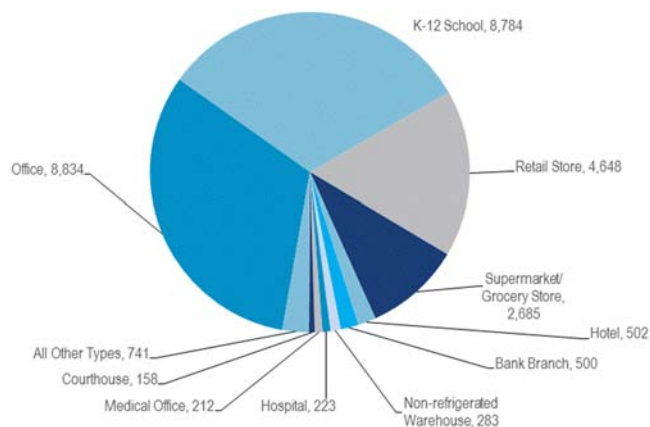

Figure 6b. Cumulative ENERGY STAR certified square footage by type (millions)

ENERGY STAR Certification for Industrial Facilities

More than 140 industrial facilities earned ENERGY STAR certification through 2015, indicating superior energy efficiency. More than 10 types of industrial plants can earn ENERGY STAR certification, including cement manufacturing, wet corn milling, cookies & crackers, juice, potato products, flat glass, container glass, auto assembly, petroleum industry, pharmaceuticals, pulp mill, and integrated mill. A break out of certified plants by type is provided in Figure 7.

Detailed industrial plant certification data is provided in Appendices G and H. For more information, visit www.energystar.gov/epis.

Designed to Earn the ENERGY STAR

A design project that achieves Designed to Earn the ENERGY STAR meets strict EPA criteria for estimated energy performance. It signifies that, once built, the building is poised to achieve top energy performance, and earn ENERGY STAR certification.

The majority of design projects fall in the K-12, office, supermarket, retail, and residence hall/dormitory building categories (Figure 8). However, there are a number of other building types that have earned this distinction.

Detailed data is provided in Appendices I and J. For more information, visit: www.energystar.gov/buildings/service-providers/design/why-you-should-design-earn-energy-star.

Figure 7. Cumulative certified industrial facilities by type

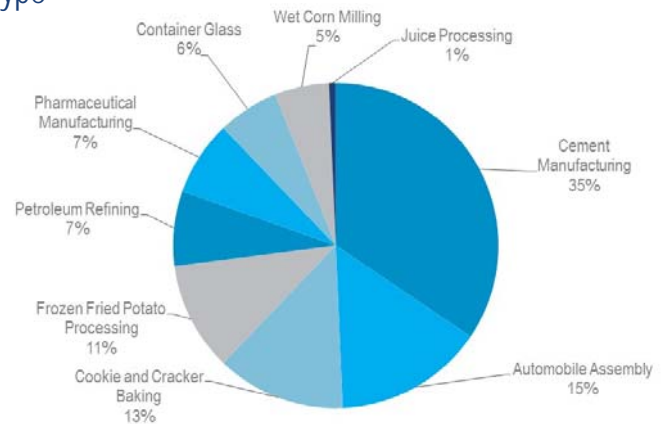

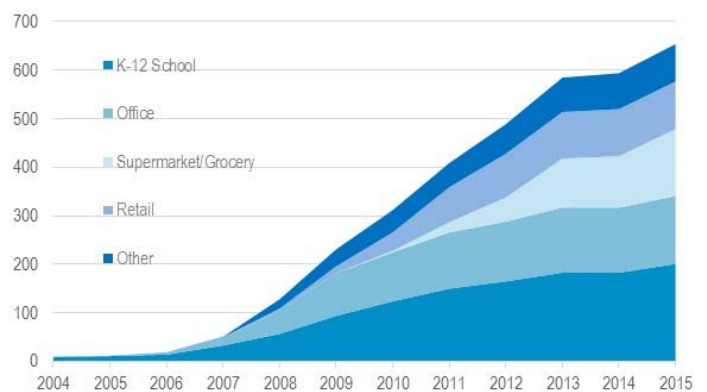

Figure 8. Cumulative Designed to Earn the ENERGY STAR projects

ENERGY STAR Challenge for Industry

The ENERGY STAR Challenge for Industry is a campaign designed to help energy managers and industrial sites improve energy performance and set goals. Industrial sites participate by committing to reduce energy intensity by 10 percent within 5 years or less.

In 2015, 53 sites achieved the Challenge and reported an average energy use intensity reduction of 20% (Figure 9). Since 2010, when the campaign was launched, more than 300 industrial facilities have achieved the Challenge, reducing emissions by more than 13 million metric tons.

For more information, visit www.energystar.gov/industrychallenge.

EPA's ENERGY STAR National Building Competition

In 2015, EPA hosted its sixth season of the ENERGY STAR National Building Competition. This competition year, EPA recognized top buildings as well as top teams that reduced the most energy or water consumption on a percentage basis over 12 months. More than 125 teams and 6,500 buildings from across the nation battled the scale and each other.

The overall winner was the team that demonstrated the largest year-over-year percentage reduction in energy "weight," defined as energy use adjusted for weather and the square footage of team buildings. In 2015, the winner was Texas A&M ESCO Project, a team of six university buildings that reduced energy use by more than 35% over the 12-month competition period, and saved nearly \$550,000.

EPA also recognized more than 100 buildings for energy or water savings of 20% or more. All winners were required to have their data verified by a professional engineer or licensed architect to earn ENERGY STAR recognition.

Read about the successful strategies competitors have used to win during each competition year, and get their best energy-saving advice at www.energystar.gov/BattleoftheBuildings.

Wisconsin	7,825	693,070,223	8,522	739,355,318	9%	7%
Wyoming	448	19,952,393	493	20,887,518	10%	5%
Non-US state/territory	5,019	1,228,790,736	5,523	1,500,980,188	10%	22%

Note: Changes in cumulative benchmarked properties and square footage may be negative. This may occur, for example, because a property owner/manager sells the property and removes the building from their Portfolio Manager account instead of transferring it to the new owner's account.

Note: Changes in cumulative certified square footage may be negative. This may occur, for example, if a property is certified in 2014, then reduces its square footage and applies for certification again in 2015. While this table summarizes unique certified buildings, the cumulative square footage reported for each year reflects the square footage value which was submitted with each building's most recent certification application.

Financial Office	49	29,894,511	71	38,388,664	45%	28%
Hospital (General Medical & Surgical)	202	137,677,981	223	145,354,946	10%	6%
Hotel	486	76,777,877	502	79,815,649	3%	4%
K-12 School	8,026	800,867,693	8,784	878,871,175	9%	10%
Medical Office	214	21,112,147	212	20,791,858	-1%	-2%
Mixed Use	83	25,931,139	78	24,172,646	-6%	-7%
Multifamily Housing	21	18,276,869	76	32,289,434	262%	77%
Non-Refrigerated Warehouse	278	66,113,952	283	64,135,948	2%	-3%
Office	8,188	1,935,768,549	8,834	2,054,581,548	8%	6%
Refrigerated Warehouse	11	2,703,705	11	2,703,705	0%	0%
Residence Hall/Dormitory	139	9,534,352	139	9,534,352	0%	0%
Retail Store	4,122	370,126,973	4,648	433,651,224	13%	17%
Senior Care Community	98	7,024,791	108	7,486,575	10%	7%
Supermarket/Grocery Store	2,641	136,537,280	2,685	139,189,160	2%	2%
Worship Facility	48	1,273,542	54	1,515,255	13%	19%

Note: Changes in cumulative certified buildings and square footage may be negative. This may occur, for example, if a property is certified as “Bank Branch” in 2014 or before, and then has a legitimate change in property type to “Financial Office” in 2015. In this case, the cumulative number of certified “Bank Branch” buildings and square footage would decrease from 2014 to 2015. Percent change in building count and square footage do not necessarily vary in the same proportion.
